

ABOUT ME

Aspiring Software Engineer skilled in full-stack development, API design, and database management. Experienced in building scalable applications using Next.js, Node.js, and SQL, with a focus on clean code and efficient problem solving.

PROJECT

Codex Build Website

Tech Stack: Next.js, Node.js, Express, MongoDB, REST APIs

- I built this Codex Build website for a hackathon using Next.js and Node.js. In this, developed a full-stack coding challenge platform using Next.js (frontend) and Node.js/Express (backend), enabling user authentication and real-time problem allocation.
- Implemented secure user authentication and session management (JWT / cookies), allowing users to register, log in, and access personalised dashboards.
- Designed an admin control panel to dynamically assign coding topics and trigger a global timer system for all participants.
- Built a synchronised timer mechanism (server-controlled), ensuring fair evaluation during hackathon-style challenges.
- Created RESTful APIs for handling user data, challenge distribution, and timer state management.
- Integrated database (e.g., MongoDB) for persistent storage of users, problems, and submissions.
- Optimised frontend performance using server-side rendering (SSR) and component-based architecture in Next.js.
- Ensured responsive UI/UX for seamless usage across devices.

First, create an account and then get the topic, and the timer starts using the admin portal.

AI Marks Grader

Tech Stack: Streamlit, SQL, Python, CSS

- Developed a web-based answer evaluation system using Streamlit to automate grading of descriptive responses.
- Implemented text comparison logic to evaluate student answers against model answers and predefined keywords.
- Designed a keyword-based scoring algorithm to assign marks based on the presence and relevance of important concepts.
- Stored and managed student responses, correct answers, and evaluation results using SQL databases.
- Built a clean and interactive UI with Streamlit and CSS styling for answer submission and real-time score display.
- Enabled quick evaluation and reduced manual grading effort for subjective-type questions.

ABHINAV MEHTA

SOFTWARE ENGINEER

SKILL

1. DBMS
2. Web development,
3. Software testing,
4. Computer programming,
5. Project management,
6. Team collaboration
7. Effective communication

EDUCATION

Bachelor of Computer Applications,
Computer Engineering
Trinity Institute of Innovations
Professional Studies, New Delhi,
India
